

Advanced Welder Training Center Celebrates Opening on May 19

Energy Solutions Group, LLC (ESG) will celebrate the opening of its advanced welder training center on May 19 at the new facility, located at 4701-C Wilson Road.

U.S. Rep. Zach Wamp, Mayor Ron Littlefield and other dignitaries will attend the event to demonstrate their commitment to this regional effort, according to ESG President Jeff Henry.

The Chattanooga Area Chamber of Commerce is assisting with the celebration, beginning at 9 a.m.

The Material Joining and Welding Technology Center features 60 welder training stations to address the critical shortage in and future demand for advanced skilled pressure parts welders, according to Henry.

“ESG has assembled superior materials and welding engineering talent representing many years of industrial experience to provide solutions to a broad range of complex materials and welding problems,” Henry said.

Announcements regarding further facility developments will be released this fall, Henry said.

The mission of ESG is to serve the U.S. as one of the primary strategic and operational resources for the power, renewable and petrochemical industries in the areas of welding and welding-related technologies, component fabrication, material processing, failure analysis and inspection.

The emphasis is on the processing of complex engineering materials and components through challenging technical requirements with aggressive project schedules.
