FEATURED INFORMATION

Chattanooga business protects at the Atlanta Super Bowl

Local company SCI USA was selected to be part of the top security measures taken to protect the more than one million attendees of the Atlanta Super Bowl yesterday (February 3, 2019). MARTA security professionals deployed ten MAST (Mobile Advanced Safety Towers) units in the surrounding areas of the Mercedes Benz Stadium as part of their successful security surveillance operations.

SCI USA was the recent recipient of the 2018 Chattanooga Technology Council Early Innovator Award for their state-of-the-art Mobile Advanced Safety Tower (MAST) that can be deployed independently in almost any location using solar energy and Commercial LTE Networks.

Stuart Bostock, SCI USA President commented, *"We are very pleased to be recognized as a provider of world-class surveillance technology – and to be able to debut this technology at the Super Bowl. We have worked hard to improve on industry standards and last year began the design and development of MAST to answer the need for a more sophisticated and flexible surveillance system for property protection, public safety and large crowd gatherings. We have found a way to integrate the most advanced safety and surveillance technology with intelligent software and analytics. Our MAST units are aesthetically crafted to fit into any environment and designed to be customizable as well as more robust and user friendly than comparable units."*

Chattanooga was introduced to the concept of this type of technology last year at Riverbend through SCI USA's trial of a similar European model positioned on the upper deck of the Southern Belle. *"Although successful, we were displeased with the limitations of that particular surveillance unit and decided we could design something more relevant to the US market with a number of increased advantages and capabilities. It took several months of research and development, but we are now satisfied that we have an excellent mobile surveillance solution."*

Security Centres International (USA) Limited is a leading national security and life-safety integrator specializing in smart technology and customized problem solving for Governments, National Security Agencies, Law Enforcement and Business. We are proud to manufacture our MAST system in Chattanooga, TN and utilize local businesses in a conscious effort to promote and support the vibrant talent pool of Chattanooga. Our MAST systems are a uniquely robust and a multi-function solution specifically designed to support public safety, law enforcement, government agencies, security operations, utilities, energy, infrastructure and commercial customers.
