The population figures include *estimates* of births, deaths, international and domestic migration and a residual component. The residual factor results from two parts of the estimates process: (1) the application of national population controls to state and county population estimates and (2) the incorporation of accepted challenges and special censuses into the population estimates. The residual represents change in the population that cannot be attributed to any specific demographic component of population change.

Metropolitan Statistical Area (MSA) includes Hamilton, Marion and Sequatchie counties in Tennessee and Catoosa, Dade and Walker counties in Georgia.
